Experiment 6

6. Program on applying layout to HTML web page.

- **HTML Setup**: Defines the document as HTML5 and sets character encoding and responsive viewport settings.
- **CSS Link**: Links an external stylesheet (`style.css`) to style the page.
- **Header**:
- `<header>` contains the main website title (`<h1>My Website`).
- **Navigation Bar**:
- `<nav>` contains a navigation menu with links to different pages (Home, About, Services, Contact).
- **Main Content with Sidebar**:
- `<div class="container">` groups the content and sidebar.
- **Sidebar (`<aside>`)**: Contains sections for Quick Links (Dashboard, Profile, etc.) and Categories (Technology, Health, etc.).
- **Main Content (`<section class="content">`)**: Displays the main text or media for the website.
- **Footer**:
- `<footer>` contains a copyright message for the website (`Website Footer © 2024`).

Output:

My Website

| Home | About | Services | Contact |

Sidebar

Quick Links

Dashboard

Profile
