Experiment 4

4. Program on CSS properties for HTML web page.

- **HTML Setup**: Defines the document as HTML5 and sets character encoding, responsive viewport, and page title. Links to an external CSS file (style.css) for styling.
- **Heading**: Displays a main heading (<h1>Styled Form with UI Elements).
- **Form**: A form that collects user input and sends data via POST to submit-form.php.
- **Form Fields**:
- **Text Input**: For the user to enter their name.
- **Email Input**: For email address (validated format).
- **Password Input**: A hidden field for entering a password.
- **Radio Buttons**: For selecting gender (Male, Female, Other).
- **Checkboxes**: For selecting hobbies (Reading, Traveling, Sports).
- **Dropdown**: A dropdown menu for selecting a country.
- **Textarea**: A multi-line input for the user's message.
- **Submit Button**: Sends the form data.
- **CSS Link**: External style.css file is used for styling.

Output:

127.0.0.1:5500/Ass3/index.html

HTML Form with UI Elements

Name: [Enter your name]

Email: [Enter your email]

Password: [ ]
